

Shippy

Vendor KYC project

Database Tables

- **Admin** : this table will store admin details
- **Vendor** : this table will store vendor details
- **Vendor_docs** : this table will store vendors documents with unique id of each
- **Vendor_register_steps** : this will store vendors registration steps with time stamp that what will be the time stamp of the form compilation

Vendor Workflow

Register

form 1

form 2

form 3

User will fill the form and fill each form if they cut the screen on form 3 then they will not see form 2 or 1 they will see only form 3. we are using vendor_register_steps for this to check the form number for the vendors

Dashboard

Here user will see all the uploaded documents and user will also see the msg and then upload the documents again

Admin Workflow

Admin

Dashboard

Click on View

Shows all the vendors with
final status

Admin will click on any specific vendor
documents button to see all documents

Documents

User dashboard

User can See the status and remarks
and again upload the documents
according to the requirements

Admin can check and change the status of
each documents and if all the documents
are approved then final status will become
approved. Admin can also send
Remarks.
